

Solution Requirements

Date	4 JULY 2026
Team ID	SWUID2026215775
Project Name	Credit Card Approval Predictions
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	<i>Users securely log in using username and password before accessing the application</i>	HIGH
2	Authorization levels	<i>Admin can manage the system; users can submit application and view predictions results</i>	HIGH
3	External interfaces	<i>The system connects to the machine learning model and customer database to process application</i>	HIGH

4	Transactions processing	<i>The system receives customer details, validates the data, predicts approval status and store the result</i>	HIGH
5	Reporting	<i>Generates prediction results showing whether the credit card application is approved or rejected</i>	MEDIUM
6	Business rules, etc.	<i>Approval depends on the factors such as income credit score, employment status and existing loans</i>	HIGH
7	Compliance to laws or regulations	<i>The system displays clear prediction results with basic recommendations for users</i>	HIGH
8	<i>Other</i>	<i>The system displays clear prediction results with basic recommendations for users</i>	LOW

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

1	Performance & Speed	<i>Predict application results</i>	<i>Response time <2 seconds</i>
2	Scalability	<i>Support increasing numbers of users and applicants</i>	<i>Supports up to 1000 users</i>
3	Security & Data Privacy	<i>Protect customer information from unauthorized access</i>	<i>Secure login and encrypted data</i>
4	Reliability & Availability	<i>The system should be available whenever users need it</i>	<i>99% uptime</i>
5	Usability & Accessibility	<i>Provide a simple and user friendly interface</i>	<i>Easy navigation with clear instructions</i>
6	<i>Other</i>	<i>The system should be easy to maintain and update with new ML models</i>	Modular and reusable code
